

Sample Assessment Rubric

Introduction

Development of rubrics as a template for identifying performance criteria has been shown to increase student achievement. A typical rubric clearly denotes each category to be evaluated and provides specific, required criteria for defining excellence, proficiency, and below-proficiency levels of performance. The sample rubrics for each chapter are intended to serve as guidelines. It should be understood that assessment is more effective when students and teachers tailor it to fit their needs. You are encouraged to work with your colleagues and especially with students to customize the rubric and the criteria. Decisions should be made together with respect to the curricular goals of the project within the particular context. For example, a class may choose to add one requirement in lieu of another, or to change the relative weighting of categories. It is helpful to remember the following recommendations:

1. Assessment should directly address the goals of the *Chapter Challenge*.

Attention has been paid to the suggested rubrics in addressing the goals of the chapter, and the *Physics You Learned* section should serve as a guide for students and teachers working with the challenge. You may choose to make changes to the rubric in order to emphasize goals important to their context.

2. Students should participate in the assessment of their own performance.

Students submit their rubric along with the grade they have given themselves. This not only encourages students to take ownership of the project, but it becomes a useful assessment tool for the teacher. If a student earns a C and gives

himself or herself a C, the conversation is very different than if a student were to earn a C and give himself or herself an A. The question you might have for the first student is, “Why didn’t you choose to do more?” While you might need to review the criteria with the second student and help understand what it takes to get an A. After the teacher has graded the assignment, students have an opportunity to revise their work, and resubmit it for the “revision” grade. Emphasis should be placed not only on the finished project, but on progress with the rubric during revision.

3. Assessment should begin from a foundation of a proficient level of performance, providing ladders for students to achieve higher orders of thinking.

Finally, the rubric is built from a foundation of proficiency (meets standards). An analogy for this level is that in the real world there is a minimum acceptable standard for performance. A CD must play without skipping, and a shirt must have all of its buttons. Anything less, is substandard. This rubric works the same way. To get a C or better, the work must meet all the standards, and fall into the “proficient” category. Work not meeting all standards must be revised and resubmitted. Beyond proficiency, students can do work which shows mastery and may therefore earn a “good” or “excellent” rating (a B or an A). The scoring column of the rubric includes suggested point ranges for each level of mastery.

For further discussion, see: “Assessment of Laboratory Investigations,” Eisenkraft, Arthur and Anthes-Washburn, Matthew. *Assessment: Research and Practical Approaches*, eds. Coffey, Douglas and Stearns. NSTA Press 2008.

Guide to the Sample Assessment Rubric

Assessment via this rubric will assign students to one of three major groups:

Excellent: Work meets all standards and demonstrates extensive evidence of mastery.

Good: Work meets all standards and demonstrates moderate evidence of mastery.

Proficient: Work meets standards without further evidence of mastery.

Please note that these groups are written at the top of the rubric page as a reminder to students.

In the table, there are three main groups of criteria—Mastery, Meets Standards, and Interventions.

A student or team of students should achieve all of the criteria in order to satisfactorily complete the project. Anything less than this will require that the student make another attempt using the Interventions listed in the last column. This is the foundation, or floor of expectations. As teachers, we have to beware that our floor of expectations does not become a ceiling for some students.

1. In the first column, there are suggestions for demonstrating mastery. Completing one or more of these may raise a student or team from Proficient, to Good or Excellent.
2. In the second column, the criteria to meet the standards for the assignment are listed.
3. Some students may have trouble meeting the standards in the Meeting Standards column. The last column provides Interventions, or suggestions for how a student might meet the requirements of the project.
4. In the Scoring column, students submit their own grade, and you respond with a grade and feedback. Students receive a final grade after a revision is submitted. The range of scores for Excellent, Good, and Proficient allow you to assign points that match a student or team's demonstrated mastery. Thus, a student who barely meets standards can receive a different score than one who shows a higher level of mastery.

Implementing the Sample Assessment Rubric

- Modify the rubric with discussions from students.
- Hand out the rubric.
- Review the rubric so that you are confident that students understand each component.
- Have students complete the Scoring column for their work in the chapter by placing checks in each of the boxes. Have students assign themselves a point value for each component.
- Have students total their score for the rubric.
- Collect students' self-appraisal of their work.
- Use the rubric to grade students' work.
- Grade students' work after you and students agree on the grade. Encourage students to improve their work for the next chapter. If you and a student disagree, have an appropriate conversation with the student about his or her work and how it could be improved.

The *Sample Assessment Rubric* on the following page is provided as a *Blackline Master* on your *Teacher Resources CD*.

5c

Blackline Master

Sample Assessment Rubric			
Mastery (Students may show mastery through these or other ideas provided by students and teachers.)	Meets Standards	Scoring (To be discussed by students and teacher.)	Interventions (Guiding questions and instructions for students falling short of the Standards.)
<ul style="list-style-type: none"> Give a “behind-the-scenes” presentation, which explains the physics of the sound and light show in an entertaining way. Use diagrams or models to illustrate the principle. 	1. Your understanding of the physics principles. <ul style="list-style-type: none"> Present two principles of sound and two of light. For each principle: <ul style="list-style-type: none"> Name the principle Explain the principle Demonstrate an example of the principle used in the sound and light show. 	Maximum: 30 Points *Excellent: 27–30 Good: 24–26 Proficient: 21–23 <i>Student Self Grade:</i> <i>Teacher Grade:</i> <i>Revision:</i>	<ul style="list-style-type: none"> For sound and light: <ul style="list-style-type: none"> What is the nature of a wave? How do waves move? How do you experience waves? How do waves interact with objects?
<ul style="list-style-type: none"> Make a recording of the show and the explanations for use as an educational video. Design a version of the popular music band video games with a controller and interface that teaches gamers about the physical principles of sound and light. 	2. Quality of your sound and light show. <ul style="list-style-type: none"> Integrate sound and light to entertain the audience. Rehearse the presentation. 	Maximum: 30 Points *Excellent: 27–30 Good: 24–26 Proficient: 21–23 <i>Student Self Grade:</i> <i>Teacher Grade:</i> <i>Revision:</i>	<ul style="list-style-type: none"> Brainstorm with your team: What do you find entertaining? How can you create something like that? Practice your sound and light show.
<ul style="list-style-type: none"> Integrate words with sounds and images (as a Web page, multimedia presentation, or using other media). 	3. Quality of the written report or poster. <ul style="list-style-type: none"> Keep your presentation within the agreed-upon time limit. (Recommended—5 minutes.) Use scientific terminology correctly, including properties of waves. Use scientific symbols for units and equations appropriately with correct symbols. Use diagrams, charts, or graphs where appropriate and label them accurately. Organize the report so it is easy to follow and understand. Use correct sentence structure. Use correct spelling, punctuation, and grammar. 	Maximum: 40 Points *Excellent: 36–40 Good: 32–35 Proficient: 28–31 <i>Student Self Grade:</i> <i>Teacher Grade:</i> <i>Revision:</i>	<ul style="list-style-type: none"> Use suggestions from your teacher to improve your written report or poster. Use the text and your log to review principles you have learned. Review investigations for examples you might use for the principles.
		TOTAL: *Excellent: 90–100 Good: 80–89 Proficient: 70–79	

*** Excellent:** Work meets all standards and demonstrates extensive evidence of mastery.

Good: Work meets all standards and demonstrates moderate evidence of mastery.

Proficient: Work meets standards without further evidence of mastery.
