

# APES Biodiversity Lab write-up

***Due this Friday January 20,2011***

Address the following questions in your conclusion based on your lab data:

1. How does biodiversity affect an environment's physical factors such as temperature, relative humidity, light and soil temperature?
2. How do plant and animal diversities vary at different sites you tested and speculate why?
3. Why does variety in an ecosystem ensure a greater chance of survival in a changing world?
4. List the ways biodiversity is being lost by human interaction through simplifying ecosystems.
