## B Physics Interactive Quiz : Circular Motion

Name:

|  | \# | 2 | question | Answer |  |  | 0 | <--score |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| \# | 1 | 8 | kg is the mass of a bucket swinging parallel to the ground with velocity $8 \mathrm{~m} / \mathrm{s}$ and radius 1.2 meters. Find the centrifugal force on the bucket |  | 426.67 | 100 | 0 |  |
| \# | 2 | 8 | What is the period of the bucket above? |  | 0.942 | 100 | 0 |  |
| \# | 3 | 8 | The same bucket is now swung perpendicular to the ground. What is the period needed to keep the bucket from splashing the spinner? |  | 2.1975 | 100 | 0 |  |
| \# | 4 | 8 | When just weightless at the top, what will be the tension in the rope at the bottom? |  | 156.8 | 100 | 0 |  |
| \# | 5 | 10 | kg is the mass of a car rounding a nonbanked 200 m turn at $40 \mathrm{~m} / \mathrm{s}$. Find the $\mu$ required to stay on the road. |  | $8.16 \mathrm{e}-1$ | 100 | 0 |  |
| \# | 6 | 4 | degrees is the angle of a banked turn at a racetrack of radius 200 meters. Find the Fc if a 900 kg car is driving at $54 \mathrm{~m} / \mathrm{s}$ on this track |  | 13122 | 100 | 0 |  |
| \# | 7 | 4 | Find the maximum velocity this car can make it around this track without flying off if $\mu$ is 0.8 |  | 41.292 | 100 | 0 |  |
| \# | 8 | 4 | Find the normal component of the Fc at this velocity |  | 915.34 | 100 | 0 |  |
| \# | 9 | 12 | kg is the mass of your waterbottle on planet Zot, where Mz is 12 ee 24 kg and Rz is 8 ee 6 m . Find the force on your waterbottle |  | 150.08 | 100 | 0 |  |
| \# | 10 | 6 | times the radius of the earth around the sun a new planet is discovered. What will its period be in days? |  | 5364.4 | 100 | 0 |  |

Extra Credit: Explain how cars can become weightless driving over small hills in the road
