

CRISPR Gene splicing

- DNA cloning and modification
- 21st century genetics
- Gene splicing of bacteria and yeast

Building on the pioneering work of our graduate Tito Jankowski ('05), creator of the Biocurious movement and DNA thermocycler, we are now moving into the latest in genetic research using the CRISPR cloning tools. Students in the independent science research teams are able to extend their classroom experiences in AP Biology with these tools, building on past projects recorded in our weblog server.
