

Earthquake and Tsunami Network

- Partnership with Pacific Tsunami Warning Center, Honolulu
- Hosting seismic sensors and analysis software
- Quake Catcher Network host station

Living on a volcanic island presents the unique opportunity to study seismic activity from these volcanoes, as well as the tsunamis that reach our shores. In partnership with the Pacific Tsunami Warning Center in Honolulu, HPA hosts seismic sensors that give us access to the tsunami warning network around the Pacific. Students analyze these data and help develop monitoring platforms for this activity.
