

# Inside the brain of a student

- Sleep and cognitive function
- Depression biofeedback
- Color, sound and brain waves

For several years, HPA students have created groundbreaking projects using Emotiv brain wave headsets, including sleep apnea, driver drowsiness detection, impact of medications on depression, and evaluation of learning tools. These tools have enabled many of our students at the energy lab to create research projects that not only enabled them to get into leading universities, they often continue their research there.
