

STEM Energy literacy project

- Hands-on energy literacy modules
- Instructional materials
- Real time access to actual data/systems

Students have created a platform for campus energy and environmental audits, with ongoing data forming a baseline for campus improvements. As part of this research, our students are creating a set of 20 energy modules, which have been developed in the Energy and Physics classes, and hopefully integrated into our 6-8 curriculum as well. We seek the tools to continue this project development, along with the platform to create a legacy of improvement and a “new normal” in sustainability.
