

Environmental Audit Nomads

Victoria Greco-Hironaka '15

This year my involvement in the Elab was through the classroom environment! This independent project enabled me to localize environmental audits within the classroom measuring: sound, light, CO₂, temperature, and humidity levels. The ultimate goal, with the information gathered from each classroom, is to improve the classroom environment so that maintenance checkups become less frequent, individuals may increase in productivity, and in the end, cost effective solutions will be yielded. Although this project has branched out to other facilities on campus

starting with the Rutgers Tennis center where we hope to make environmentally/cost effective change. This experience enabled me to create my own learning rubric, therefore I had the creative freedom to go about the topic of classroom audits and in the end, the freedom to expand beyond the classroom.
