## B Physics Interactive Quiz : Simple Harmonic motion

|  | \# | 1 | question | Answer | 0 | <--score |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| \# | 1 | 4 | kg is the mass of a weight added to a spring that then stretches 20 cm . Find the value for k for this spring |  | 0 |  |
| \# | 2 | 4 | If the same mass is then pulled down an extra 20 cm , find the upwards force from the spring in newtons |  | 0 |  |
| \# | 3 | 4 | you now let go of the mass, how many seconds will it take until it returns to the same place? |  | 0 |  |
| \# | 4 | 4 | using the information above, what is the energy stored when it is stretched the amount in the question above? |  | 0 |  |
| \# | 5 | 4 | what will be the velocity of the mass when $A$ is 10 cm below equilibrium? |  | 0 |  |
| \# | 6 | 5 | kg is the mass of a pendulum of length 3 meters. If it is raised 30 cm , what is the max PE of the mass? |  | 0 |  |
| \# | 7 | 5 | how fast will the mass be traveling at the bottom? |  | 0 |  |
| \# | 8 | 5 | How many seconds will it take to make a complete period? |  | 0 |  |
| \# | 9 | 5 | If the same experiement were done on the moon where g is $1.8 \mathrm{~m} / \mathrm{ss}$, what will the period be? |  | 0 |  |
| \# | 10 | 2.5 | $h z$ is the frequency of an oscillator with amplitude of 0.05 m . What is the period of the oscillations? |  | 0 |  |

Extra Credit: Explain how a pendulum could be used to locate underground oil, unranium or moving lava. Include diagrams with your explanation.
