About Me

- President, Automated Workflows, LLC
- Author, SpiderWorks, LLC
- Columnist, MacTech Magazine, X-Ray Magazine
- Contributor, MacScripter.net
- President, Philly Area AppleScript UG

Presentation Overview

- Introduction to AppleScript
- Discussion about AppleScript for digital photographers
- AppleScript demos
- Introduction to Automator
- Automator demos
- Resources and next steps

AppleScript

What is AppleScript?

- Built into Mac OS X
- Used to control existing applications
- Automates time consuming and repetitive tasks

Scriptable Applications

- Applications must support AppleScript
- Level of AppleScript support may vary from application to application
- Terminology may change between versions
- Scriptable applications include an AppleScript dictionary

Viewing Application Dictionaries

- Launch Script Editor
- Select "Open Dictionary" from "File" menu
- Locate and select desired application
- Library palette provides quick dictionary access for commonly used applications

Viewing Application Dictionaries

$\Theta \Theta \Theta$

Files

Standard Suite

Finder Basics

Finder items

Window classes

Legacy suite Type Definitions

Finder

Standard Suite: Common terms that most applications should support

Containers and f

close: Close an object close reference -- the object to close

count: Return the number of elements of a particular class within an object count reference -- the object whose elements are to be counted each type class -- the class of the elements to be counted Result: integer -- the number of elements

data size: Return the size in bytes of an object

data size reference -- the object whose data size is to be returned [as type class] -- the data type for which the size is calculated Result: integer -- the size of the object in bytes

delete: Move an item from its container to the trash

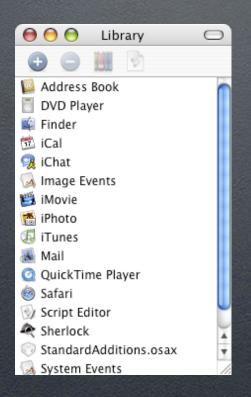

delete reference -- the item to delete Result: reference -- to the item that was just deleted

duplicate: Duplicate one or more object(s)

duplicate reference -- the object(s) to duplicate [to location reference] -- the new location for the object(s) [replacing boolean] -- Specifies whether or not to replace items in the destination that have the same name as items being duplicated [routing suppressed boolean] -- Specifies whether or not to autoroute

AppleScript and Digital Photography

Issues to Overcome with Digital Photography

- Thousands of images
- Lots and lots and lots of repetitive work!
- Lots of time consuming tasks
- Less time for creativity

Primary Areas of Consideration for Automation

Organization of images

- Naming images
- Locating and storing images

Manipulating images

- Resizing
- Adding captions, keywords, copyright info, etc.
- Converting to different types of images
- Uploading images

Tips for Organization of Images

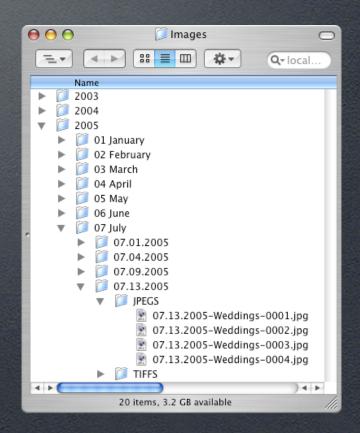

Naming images

- Come up with a good naming convention
- Try to keep names unique
- Consider including the date
- Consider including a category or other identifier
- Display the file extension

07.13.2005-WED-0001.jpg 07.13.2005-WED-0002.jpg

Tips for Organization of Images

- Storing images
 - Create a folder structure that makes sense
 - Consider splitting folders by date, type, and possibly category
 - Consider an image catalog

AppleScriptable Image Catalogs

• iPhoto

- Extensis Portfolio
- iView MediaPro
- Canto Cumulus (limited)

Manipulating Images

 Consider having AppleScripts trigger Photoshop Actions

• Batch process whenever possible

AppleScripting Image Manipulation and Conversion

- Adobe Photoshop
- Graphic Converter
- iMagine Photo
- Image Events

AppleScript Demos

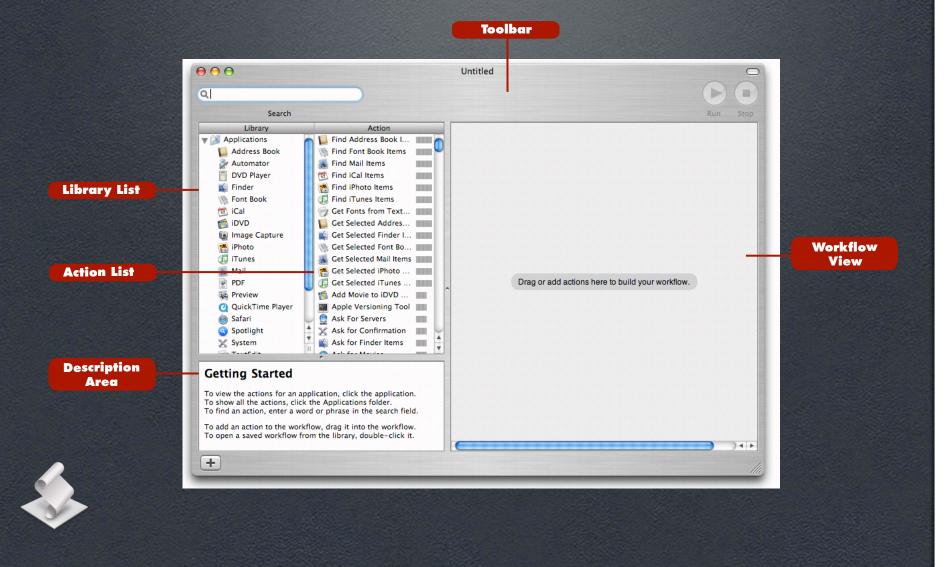

Automator

HELLO. I'M otto.

What is Automator?

- New with Mac OS X 10.4 (Tiger)
- Brings the power of workflow automation to the USER level!
- Users create workflows, using pre-built actions
- No programming required!

Automator's Interface

Building a Workflow

Library	Action	Ask for Confirmation	Anything T
V Applications	🗙 Ask for Confirmation	1 Ask for Commation	Anything *
🞑 Address Book	🙀 Confirmation Dialog	Message	
🎯 Automator	💥 Execute Workflow		
DVD Player	💥 Pause	Explanation	
🎬 Finder	🗄 Run AppleScript		
🐘 Font Book	💥 Wait for User Action		
📆 iCal	Run Shell Script		Cancel OK
Image Capture	🔀 View Results		Anything

- Each action is responsible for a single task
- Drag actions into workflow view to create a complete workflow
- Workflows may be saved as applications, iCal alarms, folder actions, and more!

What Can Automator Do?

- PDF contact sheet creation
- Generate emails
- File and folder renaming
- Resize images
- Much more!

Apple Applications with Automator Actions

iDVD
iPhoto 5
iTunes 4.8
Keynote 2
SoundTrack Pro
Xcode 2

Third Party Applications with Automator Actions

- BBEdit
- Graphic Converter
- NetNewsWire
- OmniOutliner
- Phlink
- Transmit

Third Party Developer Actions

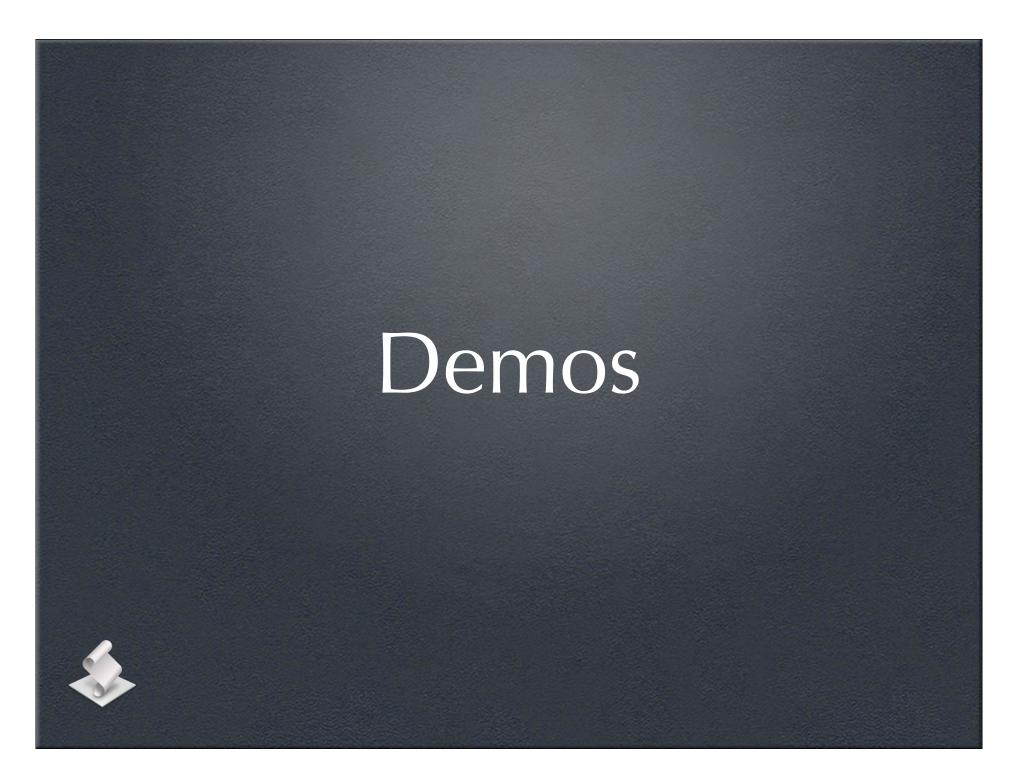

- GarageBand
- InDesign
- iTunes
- Photoshop
- QuarkXPress
- UNIX
