.plist file  
wizardry

# Modify Unexpected Quit behavior

- 👁️ **Why to do it:** If you would rather get more (or less) information after an unexpected quit.
- 👁️ **Utility:** CrashReporter Prefs
  - 👁️ Can also use Property List Editor (PLE) or a `<defaults>` command in Terminal.
- 👁️ **How to do it:**
  - 👁️ Launch CrashReporterPrefs and make selection. OR
  - 👁️ Change DialogType value in PLE.

# Super-enlarge Dock icons

- 👁️ **Why to do it:** Just for fun
- 👁️ **Utilities:** Dock, System Preferences, & Property List Editor
- 👁️ **How to do it:**
  - 👁️ Enable Dock Magnification: "Turn Magnification On."
  - 👁️ Change magnification size/slider in Dock System Preferences pane. This just creates the property, if not already created.
  - 👁️ Open `com.apple.Dock.plist` in Property List Editor.
  - 👁️ Change the value of the `largesize` property to 512 (which is the maximum value that affects the appearance). Save the change.
  - 👁️ Relaunch the Dock.

# Move a Dashboard Widget to the Desktop

- 👁️ **Why to do it:** To access a widget without having to shift to Dashboard mode
- 👁️ **Utilities:** Property List Editor or Terminal
- 👁️ **How to do it:**
  - 👁️ Open Property List Editor and add a property. Name it devmode and give it a value of YES.
    - 👁️ [Or in Terminal, type:  
defaults write com.apple.dashboard devmode YES.]
  - 👁️ Log out and log back in again.
    - 👁️ [Or relaunch Dock via Activity Monitor.]
  - 👁️ Activate Dashboard, click-drag desired widget to desktop.
  - 👁️ Before releasing mouse, press F12 to de-activate Dashboard.

# Permissions wizardry

# Open applications with root access

- 👁 **Why to do it:** To modify and save changes to otherwise “unsavable” documents.
- 👁 **Utility and app:** Pseudo and any application, such as Property List Editor.
- 👁 **How to do it:** Drag the application icon to the Pseudo icon. Documents will now save.
  - 👁 **Note:** Can also use sudo command in Terminal.
  - 👁 **Note:** BBEdit has its own option to save “unsavable” files.

Packages  
wizardry

# Edit text of dialogs

- 👁 **Why to do it:** Why not?
- 👁 **Utility:** Any text editor (with Pseudo if needed for root access).
- 👁 **How to do it:** As an example, change the text of the unexpected quit message:
  1. Go to `/System/Library/CoreServices` and open the `CrashSubmitter` package. [Save a copy before making changes.]
  2. Navigate to `Contents/Resources/English.lproj` and open the `crashdump.strings` file in TextEdit. Use Pseudo to open TextEdit.
  3. Change the message to whatever you like, and save it.
- 👁 **Note:** As just covered, BareBones' TextWrangler and BBEdit let you edit root-owned files, bypassing the need for Pseudo.

# Add scrollbars to Stickies

- 👁️ **Why to do it:** For convenience.
- 👁️ **Utility:** Interface Builder (or various third party utilities).
- 👁️ **How to do it:**
  - 👁️ Open Stickies package. Go to: Contents/Resources/English.lproj
  - 👁️ Open StickiesDocument.nib in Interface Builder
  - 👁️ Click Window from Instances. Select Show Info
  - 👁️ Click on text area of Stickies window so Attributes list of Info window is NSTextView
  - 👁️ Enable Show Scroller. Save.
- 👁️ **Note:** A backup copy of the original is saved automatically.

# Change a document via its file extension

- 👁️ **Why to do it:** This is one way to change the behavior of a document when you double-click it.
- 👁️ **Utility:** The Finder.
- 👁️ **How to do it:** Change or delete the portion of the name after the period.
  - 👁️ For example, you can use this as an alternate way to get inside a package (deleting extension changes package to folder).

Invisible  
wizardry

# Hide files for security

- 👁️ **Why to do it:** Simple security to hide files.
- 👁️ **Utility:** Invisibles [or Property List Editor and/or Terminal].
- 👁️ **How to do it:**
  - 👁️ Use Invisibles to make all invisible items visible.
  - 👁️ Create a folder and name it `.TopSecret`. Put any files you want to hide in here.
  - 👁️ Use Invisibles to make invisible files visible again.
  - 👁️ Redo procedure to access or modify folder contents.
  - 👁️ **Note:** Can use Terminal to access/move files in `.TopSecret` folder.
  - 👁️ **Note:** Can use Property List Editor or Terminal instead of InVisibles.

# Advanced Wizadry

# Create a launchd item

- ② **Why to do it:** To see how this new technology in Tiger works.
- ② **Utility:** Property List Editor and Terminal.
- ② **How to do it:**
  - ② Create a file with name and text as shown in next display. Essentials:
    - ② Program Arguments: Identifies program to be launched
    - ② WatchPaths: Identifies path to folder that, if modified, will cause program to launch.
  - ② Put file in /Library/LaunchAgents folder.
  - ② In Terminal, type: `launchctl load /Library/LaunchAgents/com.apple.preview.plist`. [Or just restart.]
  - ② Drag a file into folder.

com.apple.preview.plist

New Sibling Delete Dump

Property List	Class	Value
▼ Root	Dictionary	3 key/value pairs
Label	String	com.apple.preview
OnDemand	Boolean	Yes
▼ ProgramArguments	Array	1 ordered object
0	String	/Applications/Preview.app/Contents/MacOS/Preview
