WDS

Settings in this section determine how this base station's Internet connection is shared with computers connected to its AirPort network.

Distribute IP addresses

AirPort client computers:

Share a single IP address (using DHCP and NAT)

Use 10.0.1.1 addressing

Use 172.16.1.1 addressing

Use 192.168.1.1 addressing

Other...

Ending: 10.0.1.200

Share multiple IP addresses (using only DHCP)

DHCP lease:

4

Hours

Message:

Enable PPP Dial-in

Configure...

LDAP Server:

Enable AOL parental controls

NAT and DHCP will be used to share a single IP address. Client computers on the network should configure TCP/IP to obtain an IP address using a DHCP server. The base station will act as a bridge between the AirPort and local Ethernet network.
