WDS

Settings in this section determine how this base station's Internet connection is shared with computers connected to its AirPort network.

Distribute IP addresses

AirPort client computers:

Share a single IP address (using DHCP and NAT)

Use 10.0.1.1 addressing

Share a range of IP addresses (using only DHCP)

Beginning:

DHCP lease:

Hours

Ending:

Message:

Enable PPP Dial-in

Configure...

LDAP Server:

Enable AOL parental controls

Internet sharing using network address translation and DHCP is not enabled. Client computers on the network must configure TCP/IP manually. The base station will act as a bridge between the AirPort and local Ethernet network.
